

PRINTING for the AUTHOR,  
By N. NICKSON in YORK,  
The SECOND EDITION of  
A  
NEW SYSTEM  
O F  
HUSBANDRY.

In Three VOLUMES Octavo.

To SUBSCRIBERS Twelve Shillings and Sixpence, to NON-SUBSCRIBERS Fifteen Shillings the Set, in Boards.

By C. VARLEY, Esq;

THIS Work is wrote from Experience,  
and treats of the following Particulars, viz.

On Wheat, Barley, the six-rowed Barley; on Rye, Beans, Pease, Oats; on the naked Oat; on Buck-Wheat, Rape-Seed, Cole-Seed, Cabbage, Turnip-Cabbage, and Turnips; on Madder, Pickles for Wheat.

How to prevent Worms from destroying green Corn, Vermin from destroying the Seed, when sown, and the Flie from destroying young Turnips; also how to preserve Turnips good for Spring-Feeding; how to prevent Smutty Wheat, and if black, how to clean it without washing.

On Hemp, Flax, Vetches, Tares, Lentilles; on all Sorts of Grass Seeds, viz. Clover, Lucerne, Saintfoin, Rye-Grafs, and Burnet; on all Sorts of Manures, Marls, Clays, Sands, &c. How to destroy Whins, and improve barren Land of all Sorts.

A sure Method to prevent the Rot in Sheep; besides many other proved Receipts for the Cure of all Sorts of Cattle.

On rearing, breeding, and feeding Cattle, explaining each Sort of Food which lays on Fat and Lean; on a new discovered cheap Feed, which upon first Trial produced twenty Stone five Pounds of Tallow in a small Beast.

How to make Fences, plant Quicks, and drain wet Lands, upon a better and much cheaper Plan than at present is practised in this Kingdom.

Also a new and most valuable Method to raise good and clean Crops of Corn on the same Ground every Year (after the first) for ever, without either Fallow or other Manure than what itself produces.

A Description of a most valuable new-invented moving Sheep-House, Cow-House, and Stable, which will be of great Utility to those who keep any Sort of Cattle, particularly for eating Turnips or Cabbages on the Ground with Sheep or Oxen, by which Means there is not the least Waste; and tho' the Land be wet and clayey, the Cattle are kept clean, warm, and dry all Winter.

The Land receives the Benefit of the Urine as well as Dung, and all this with much less Trouble and Expence than with common Sheep-Pens. Each House measures the Ground as it goes, and also gives the Weight of Turnips each Acre produces, and what Weight the Cattle within each House eats from one Day to a Year. A strong Boy may move them to any Part of a Field, and can take care of five or six Hundred Sheep without any other Assistance. A Waggon may carry five or six at a Load, if wanted to be carried from Field to Field, &c. Two Men may take a House into eight Parts in fifteen Minutes, and set it up again in the same Time: But what adds to their Value, is being of a simple Construction, and within the Purchase of every Farmer. A House for twenty Sheep, and that may last twenty or thirty Years, will only cost two Guineas and an Half, and for three Horses or four Oxen, five Guineas.

The universal Applause that this Work has met with, flatters the Author, that these new Discoveries will shew themselves Proof against every Obstacle that can be started by the most bigoted old-fashioned Farmer; though indeed Strength of Argument, or even ocular Demonstration, will be laughed at by some of them: But happy it is, that the Field of Improvement is large and open for every one to try their Talents, though only expected to flourish under the Patron-

age of Men of real Sense or enlarged Faculties; it is them which must foster every new Scheme, and bring it to Maturity; and it is only such that the Author desires to peruse his Work, as the Simple and Illiterate are ever ready to laugh at what appears wonderful, or out of the common Road, but Men of enlarged and refined Ideas will assist Ingenuity in every new Enterprize that appears for the Public Good.

The Author returns his sincere Thanks to the great many respectable, worthy spirited Gentlemen who have already subscribed to this Work, which shews their laudable Intention to encourage useful Knowledge in that valuable Science of Agriculture.

This Work also contains two or three Chapters which are humbly offered for the Perusal of the Legislature, in regard to two or three Acts of Parliament which might be passed for the Good of the Public.

The Work is put to Press and in great Forwardness.

N. B. Such as please to become Subscribers, are desired to give their Orders to a Rider that will attend on them with the Subscription Book; but no Money will be taken till the Books are delivered.

N. NICKSON, Printer in YORK, takes in all Letters relating to this Work.
